November: a great month for Gnosis, worth celebrating!

This month marks the beginning of a new chapter for our company: after Lesaffre acquired a majority share of the company back in 2015, this month Lesaffre completed the full acquisition of Gnosis. The next level of our professional adventure, with a new leadership team and strong business capabilities born from the merger of two successful businesses: Gnosis and Lesaffre Human Care. The newly combined entity, renamed as **Gnosis, by Lesaffre**, will bring further improvements in terms of innovation, products and services, while preserving its prior customer guarantees.

This is indeed a major milestone in the company's history, but November will also be remembered for other events. To mention a few, the installation of a new fermenter at Pisticci Operations aimed at increasing the production of vitaMK7®, and the first participation of Gnosis at Health ingredients (Hi) Europe, which was held in Frankfurt from November 27th to 29th.

We appreciate this opportunity to share with you our adventure, so please continue to follow us and join us in celebrating another great month!

Warm Regards,

Marc Philouze
CEO, Gnosis

Gnosis adds a new 120 m³ fermenter to its Pisticci plant

Gnosis is glad to announce the installation of a new fermentation line at the manufacturing plant of Pisticci.

This new fermenter will increase the production capacity to 350 m³, thus satisfying all customers appreciating our vitaMK7®.

Produced naturally from the patented biofermentation process of the *Bacillus subtilis* natto, vitaMK7® is today one of the top products provided by Gnosis, duly in line with current market demand for products with a clean label and a purity profile.

Mild & moderate depressive symptoms: new data find Adonat®-SAME helpful

A new clinical study shows the effects of a S-AdenosylMethionine-based dietary supplement (SAME 200 mg/die - Adonat® SAME ingredient manufactured by the biotech company Gnosis SpA - plus vitamin B-complex) in improving mild and moderate depressive symptoms. The study included 60 patients randomly allocated into two groups.

The study group was treated with SAME-vitamin B complex while the control group was administered a placebo, once a day for three months.

The results of the study are very positive for all the different kinds of tests with statistically significant differences between the study group and the control group.
